

## How To Install Waterproof case & Controller

### Step1

Select an appropriate location, ensuring the distance between the waterproof case and the power socket is less than 4.3 feet (1.3 meters). Then use the hole location template on this page to mark the hole positions.

### Step2

Use a 5.5mm (0.217 inch) drill bit to create the holes and insert the expansion anchors. Secure the waterproof case to the wall by driving the screws through the two mounting holes in the plastic casing.

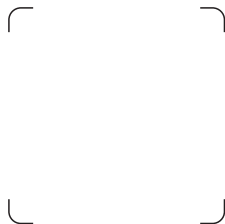

### Step3

Plug the power adapter into the socket, fit the cover in place, and secure it with the five screws.

### Step4

Mount the irrigation controller and fasten it securely with the two screws.

**Congratulations! You have successfully installed your new irrigation controller. Power it on and embark on your smart irrigation journey!**
